SKILLS

PROGRAMMING

Languages:

- C
- C++
- Java
- Python
- JavaScript

Tools:

- Git • Windows

Framework & Library:

- Django • React JS

Technologies:

- CSS • HTML • SQL

PROJECTS

Syllabus Manager (SQLITE DATABASE – PROJECT) | DJANGO

Link | <https://vivekpatil28.pythonanywhere.com/>

In the project I integrated various functionalities like user authentication, user syllabus managing by various checkboxes, build various tests for every topics in the website and also has an leaderboard window where users can see the top rankers. Also included the chart.js to proper visualization of the covered syllabus in the form of graphs.

E-Commerce Website (SQLITE DATABASE – PROJECT) | DJANGO

Link | <https://mbcart.pythonanywhere.com/>

I developed an E-Commerce Website as a personal project, focusing on creating a professional online shopping experience. The main objective was to provide users with the ability to browse and purchase products, manage orders, utilize the "add to cart" functionality, and submit product reviews.

By working on this project, I gained practical experience in e-commerce website development, database management using SQLite. The project demonstrates my ability to create a professional and user-friendly online shopping platform.

Comment System (SQLITE DATABASE – PROJECT) | DJANGO

Link | https://github.com/VivekPatil28/Comment_System_in_Django

The comment system in Django is a feature that allows users to provide feedback or engage in discussions on various aspects of a project. It enables users to submit comments, which can be associated with specific project elements such as articles, images, or other content. The system provides functionality for users to write, edit, and delete comments, as well as for administrators to moderate and manage the comments. By implementing the Django comment system, users can actively participate in project discussions and contribute to the overall collaborative experience.

Envento (SQLITE DATABASE – PROJECT) | DJANGO

Link | <https://github.com/VivekPatil28/Envento>

Envento is a software downloading website built with Django, designed to provide convenient redirection to respective application websites for downloads. Its primary purpose is to categorize various software into a single platform. By developing Envento, I gained hands-on experience in Django web development, creating a user-friendly interface, and organizing software into categories for easy navigation. The project showcases my ability to build and deploy a functional web application that simplifies the software download process.

ACHIEVEMENTS

- Completed Accenture Developer Virtual Experience Program
- Completed Certificate Program in Financial & Digital Literacy
- Participated in INTELLECTUAL PROPERTY Awareness / Training program
- Completed Excel Essentials for Data Analytics Internship provided by IBM (Coursera)
